Technical Information

Electrical specifications

Introduction

The drive motors meet VDE regulations and European motor standards with an electrical voltage tolerance of ±5% (DIN EN 60 034-1) as well as the requirements for the CE mark.

We also provide designs for special operating conditions (e.g., extreme humidity or dust).

Designs are possible that conform to non-European regulations, e.g. CSA, UL or special requirements, e.g. for the USA or Japan.

Protection class (DIN EN 60 034-5/4.88)	IP 54
Temperature class	F
Pole pairs	2-pole
Ambient temperature (DIN EN 60 034-1)	Max. 40°C At max. 1000 above sea level

Electrical parameters*

	50 Hz	**60 Hz**
≤ **4 kW**	Δ/Y 230/400 V	Δ/Y 265/460 V
> 4 kW	Δ 400 V	Δ 460 V

* other electrical parameters on request

For connection to 60 Hz, in addition to selection of the corresponding motor winding, the hydraulic properties are adjusted at the factory, for example using smaller impellers.

Switching-on frequency

Spandau pumps are designed for continuous duty. If this is not possible due to the process, the pump's constant flow rate can be attained using a regulating valve, for example.

Motors	**Max. duty cycles per hour**
< 3 kW	200
3 to 5.5 kW	40
7.5 to 10 kW	20
> 10 kW	15

DESINA

(DistributEd and Standardized INstAllation technology for machine tools and production systems) is a complete concept for the standardization of the electrical, hydraulic, and pneumatic installation of automated machine tools and production systems. Spandau pumps are available with DESINA-compliant electrical connections on request.

Efficiency classification as per DIN EN 60034-30

The drive motors meet at least efficiency IE2.

Efficiency	**IE code**
Super Premium	IE4
Premium	IE3
High	IE2
Standard	IE1
Below Standard	-

Sound pressure specifications

All sound pressure values indicated in the catalog apply to 50 Hz operation. In 60 Hz operation, the values increase by approx. 3 – 4 dBA. On request, axial fans on the motor side are available to reduce noise.

Frequency converters

Pumps with frequency converters achieve up to 70% energy savings in practice. The controlled speed regulation ensures an effective delivery rate and utilization with lower heat input into the overall system. This reduces the required cooling effort.

A pump with an integrated frequency converter improves the process flows of machines and systems:

- Optimized adaptation to the respective machining process due to speed regulation
- Gentle start-up due to programmable ramp-up time
- Low level of wear on rotating components
- Low-noise operation

Keep the entire machining process under control with a single frequency-controlled pump:

- Delivery rate can be adjusted precisely to the respective power requirements
- Universal controllability of pump speeds through all pressure ranges

Electrical specifications

Site altitude and ambient temperature

The following tables show the permissible temperature limits based on a coolant temperature of 40°C and a site altitude up to 1000 m above sea level (measured with the resistance method) and maximum temperatures according to DIN EN 60 034-1 assigned to temperature class F.

Temperature class	Winding temperature [°C]		Max. temperature [°C]
	< 600 W	> 600 W	
F	110	105	155

Reduced rated motor performance results if the relevant ambient conditions deviate from the design point, e.g., ambient temperature above 40°C or site altitude above 1000 m above sea level. Deviations in the ambient conditions must be indicated when ordering.

Reduced performance at ambient temperature above 40°C

Ambient temperature [°C] (site altitude up to 1000 m above sea level)	Performance [%P_N]
45	95
50	90
55	88
60	80

Reduced performance at altitude over 1000 m above sea level

Site altitude [m] (40°C ambient temperature)	Performance [%P_N]
2000	94
3000	86
4000	78

Overload capacity

At a normal operating temperature, under DIN EN 60 034-1/11/95 1.5 times the rated current over a period of 15 seconds is permissible at rated voltage and rated current.

Terminal box positions

The position of the terminal box is specified according to DIN EN 12157 and can be selected from the four layouts depicted below.

Pos.	Layout	Note
1		**Terminal box position 1: Standard design*** Terminal box opposite the discharge port
2		**Terminal box position 2:** Terminal box left of discharge port
3		**Terminal box position 3:** Terminal box above discharge port
4		**Terminal box position 4:** Terminal box right of discharge port

* Please indicate desired position of terminal box when ordering!

Varnishing

Standard: RAL 9005 (black, satin)

Technical Information

Installation and operation

Centrifugal pumps

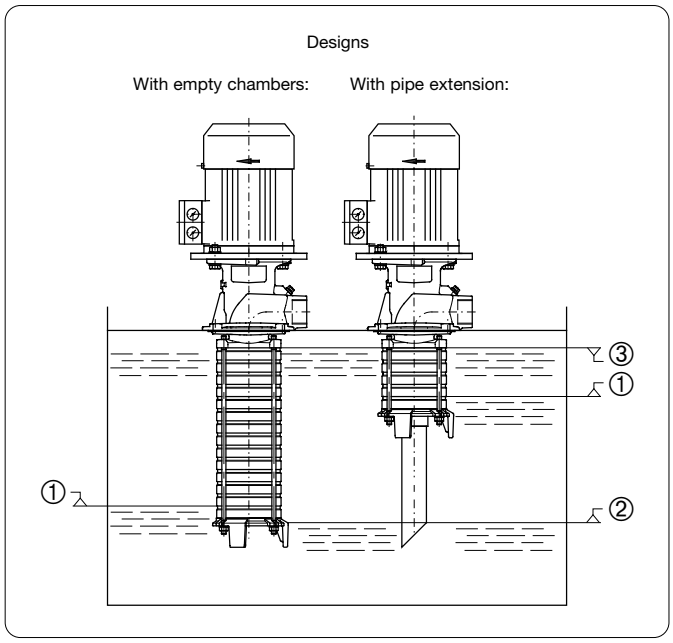
The standard design is suitable for vertical installation in the reservoir.

Spandau immersion pumps can be adapted to various installation conditions by incorporating blind chambers or by adding a pipe extension.

When switching on the pump, the minimum fluid level must be above the lowest pump chamber (1).

The pump then feeds up to the intake opening in the chamber or pipe (2). See the type-specific pump drawings in manuals for the highest permissible fluid level (3).

Note: All devices are only to be installed or mounted by a qualified person. The existing safety measures are to be taken into consideration. Please refer to our operating instructions to avoid errors.



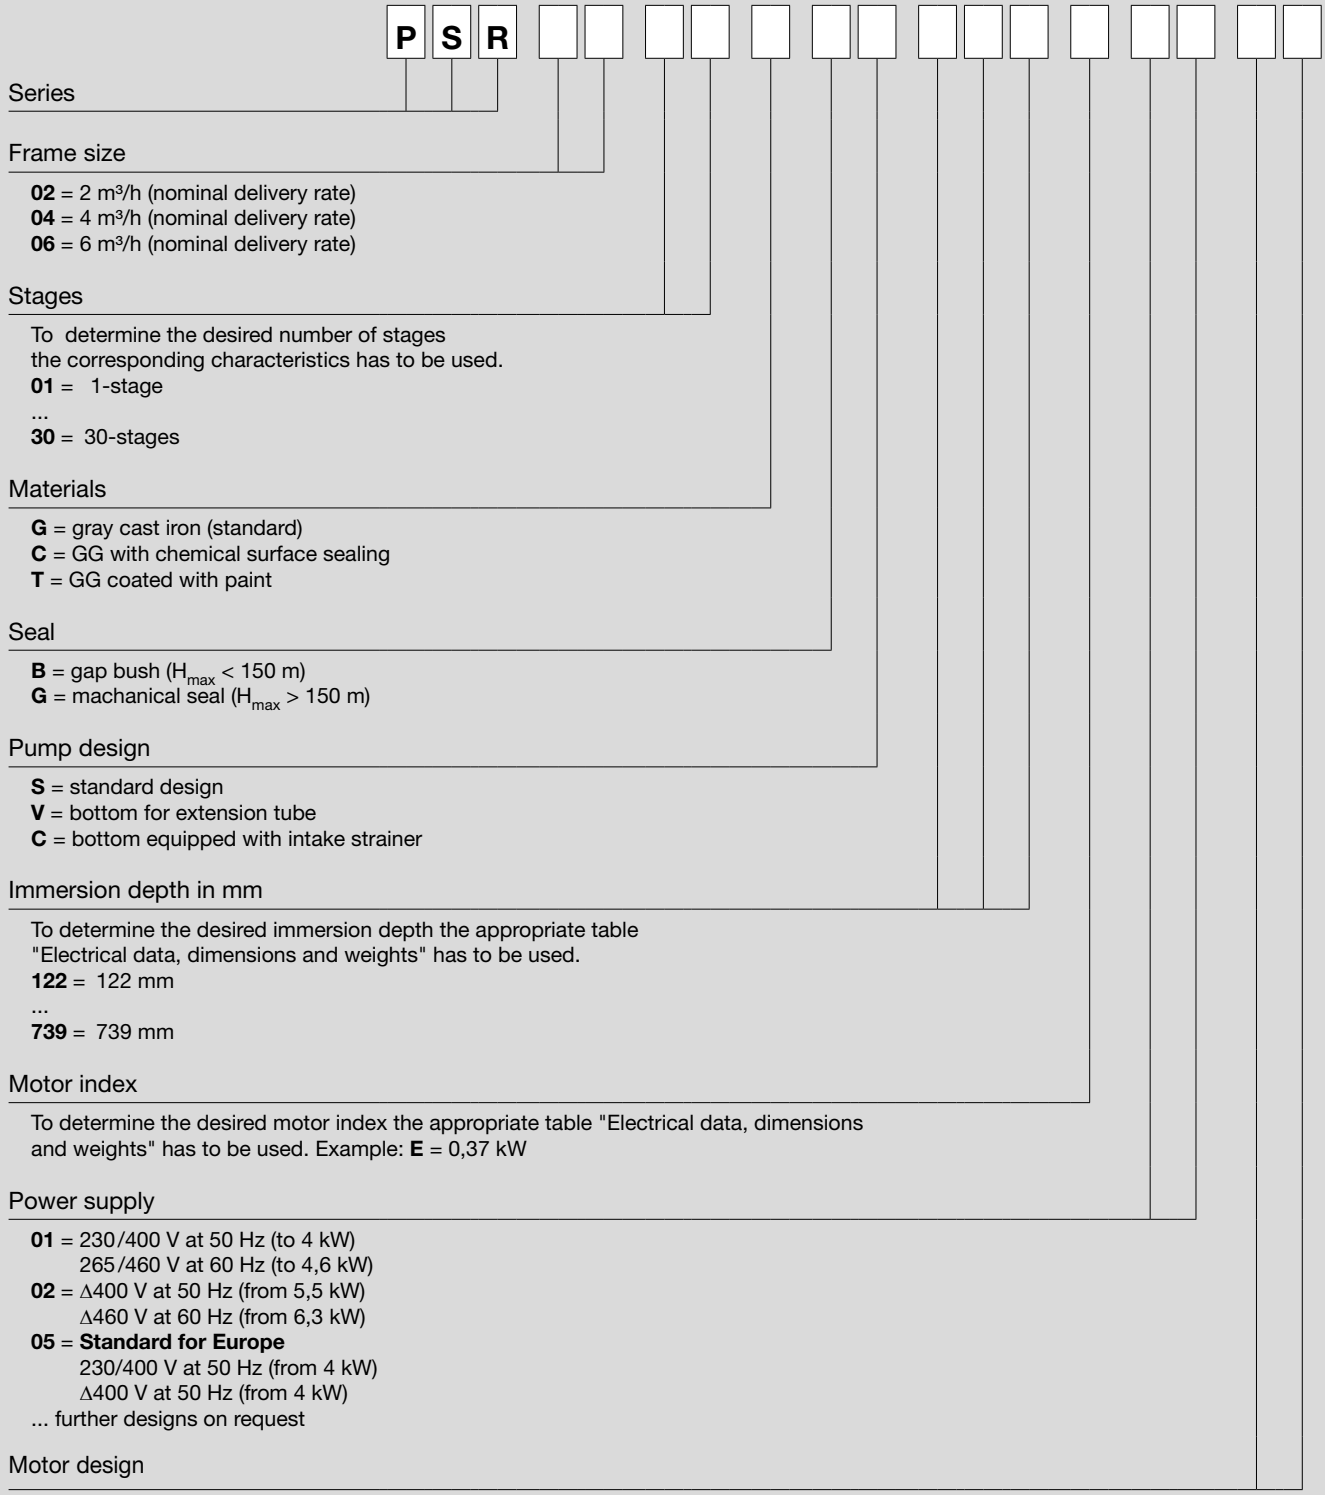
Dry running

The pump must not be put into operation without fluid for pumping. An incorrect direction of rotation and/or dry running can damage the pump. When pumping, the unit can operate without fluid for short periods and under certain circumstances.

A minimum volumetric flow of 5 to 10% of the nominal delivery rate must be ensured.

Order code for centrifugal pumps

based on the PSR pump as an example



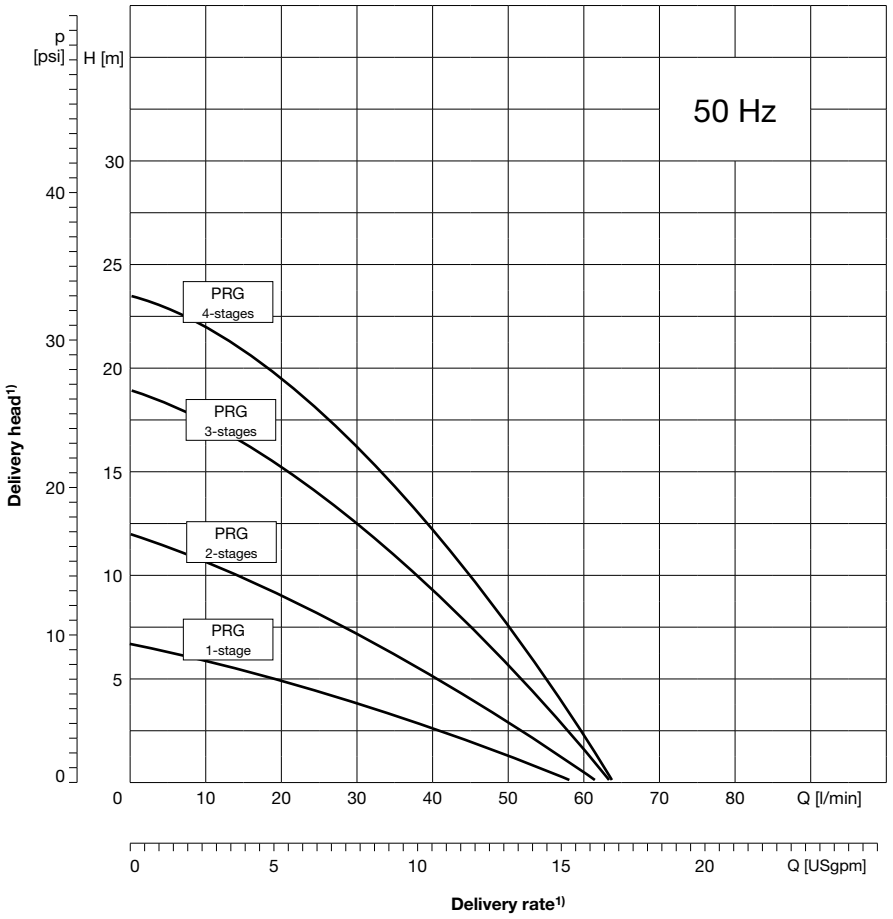
Order example: PSR0218GBS481J01BA
Series: **PSR**, Frame size: **02**, **18**-stages, Material: **G** grey cast iron, Seal: **B** gap bush, Pump design: **S** standard design, Immersion depth: **481** mm, Motor index: **J** 1,5 kW, Power supply: **01** 230/400 V 50 Hz; 265/460 V 60Hz, Motor design: **BA** standard form 0,75 kW

PRG – Immersion pumps, sealless

50 Hz, closed impellers

Features

- One or multi-stages centrifugal pump
- For delivery of slightly contaminated types of fluids
- Installation direcly and vertically into the reservoir
- Pressure port is located above the reservoir plate and designed with internal thread G1 1/4



Technical Data

Delivery rate Q_{max}	62 l/min
Delivery head H_{max}	23 m
Immersion depth t_{max}	320 mm
Immersion depth	max. 20 mm^2/s
Delivery temperature	-20 °C to +60 °C
Grain size	max. Ø0,3 mm
Contamination	max. 50 g/m^3
Direction of rotation	clockwise (as viewed looking down on the motor's ventilation side)
Fluids delivered	Water, emulsions (synthetic / mineral oil), also with chemical additives, distilled water deionization, ized water, photographic solutions

Mechanical design

Component	Material
Flange	POM / GF
Shaft	1.4122
Impeller	PEI / GF
Intermediate chamber	POM / GF
Pumps bottom	POM / GF
Bushing	PTFE graphite

Variations

Component	Material
Mixing paddle	plastic

[1)] Data for viscosity of ~1 mm^2/s at a density of ~1 kg/dm^3. Minimum volumetric flow: 5 to 10 % of nominal delivery rate.

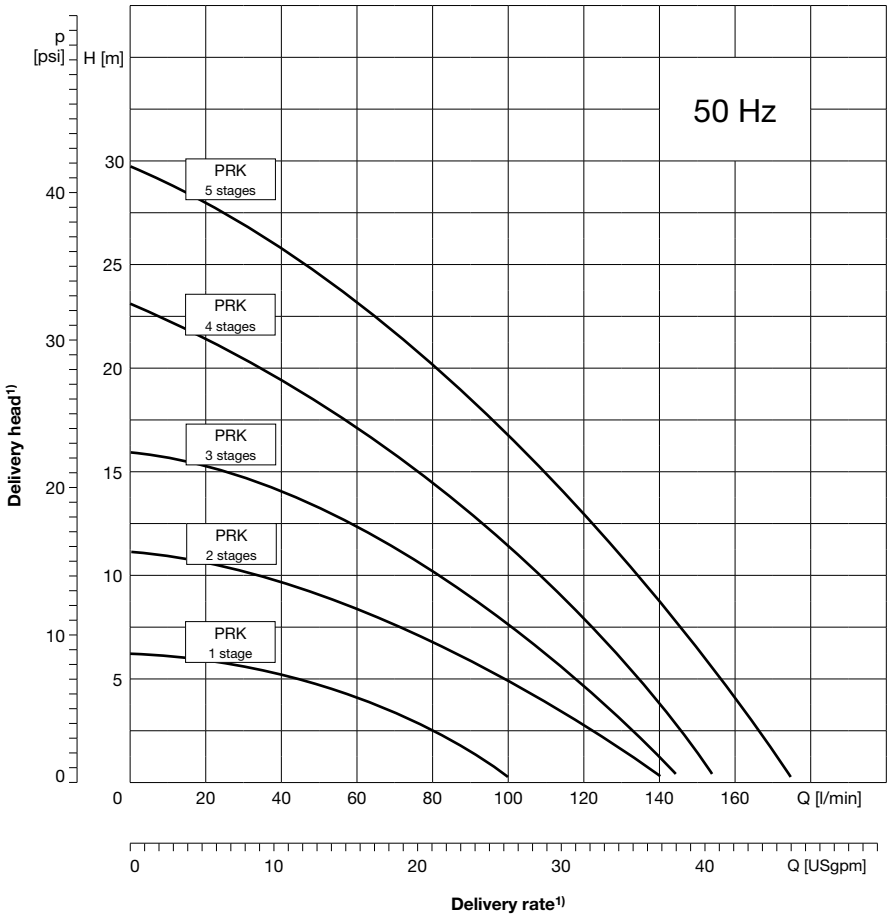
PRK – Immersion pumps, hydrostatic sealing

50 Hz, open impellers



Features

- Vertical multistage pump, hydrostatic sealing
- For delivery of slightly contaminated types of fluids
- Installation direcly into the reservoir
- Pressure port is located above the reservoir plate and designed with internal thread G3/4
- Wide range of immersion depths 90-410 mm

Technical data

Delivery rate Q_{max}	175 l/min
Delivery head H_{max}	29 m
Immersion depth t_{max}	375 mm
Kinematic viscosity	max. 20 mm^2/s
Delivery temperature	+5 °C to +60 °C
Grain size	max. Ø3 mm
Contamination	max. 50 g/m^3
Direction of rotation	anti-clockwise (as viewed looking down on the motor's ventilation side)
Fluids delivered	Emulsions, cooling and cutting oils, cleaning liquids, water, mild acids

Mechanical design

Component	Material

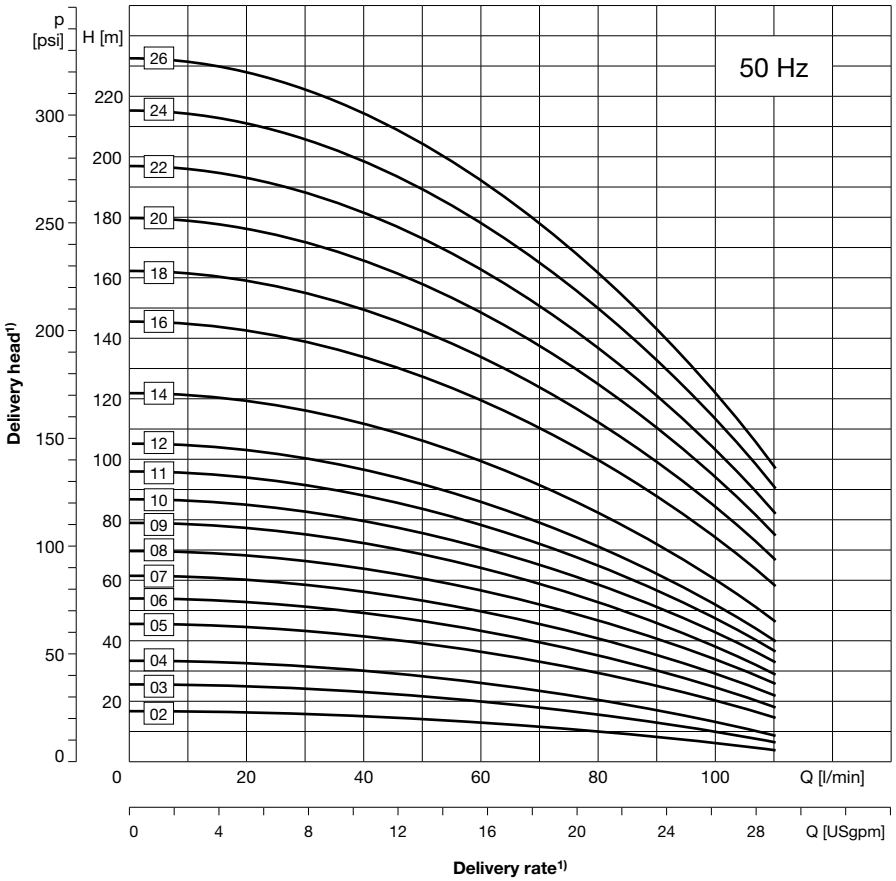
PSR 04 – Immersion pumps, sealless

50 Hz, closed impellers



Features

- Vertical multistage coolant pump
- Connector dimensions as per DIN EN 12157
- For delivery of slightly contaminated types of fluids
- Installation direcly into the reservoir
- Pressure port is located above the reservoir plate and designed with internal thread G1 1/4

Technical Data

Delivery rate Q_{max}	110 l/min
Delivery head H_{max}	232 m
Immersion depth t_{max}	653 mm
Kinematic viscosity	max. 20 mm^2/s
Delivery temperature	-10 °C to +80 °C
Grain size	max. Ø2 mm
Contamination	max. 50 g/m^3
Direction of rotation	clockwise (as viewed looking down on the motor's ventilation side)
Fluids delivered	Emulsions, cooling and cutting oils, cleaning liquids, water, mild acids

Mechanical design

Component	Material
Flange	EN-GJL-200
Shaft	Stainless steel 1.4122
Gap bush (H_{max} < 150 m)	POM
Mechanical seal (H_{max} > 150 m)	WC, carbon, FKM, stainless steel 1.4571
Impeller	Stainless steel 1.4301
Intermediate chamber	Stainless steel 1.4301
Tension anchor	Stainless steel 1.4057
Bushing	Stainless steel 1.4301
Pumps bottom	EN-GJL-200
Elastomers	FPM

Variations

Component	Material
Flange	with chemical surface sealing or coated with paint
Bottom for extension tube	Stainless steel 1.4301
Intake strainer	Stainless steel 1.4301
Pumps bottom	Stainless steel 1.4308

1) Data for viscosity of ~1 mm^2/s at a density of ~1 kg/dm^3. Minimum volumetric flow: 5 to 10 % of nominal delivery rate.

PXA 18 – Immersion pumps, sealless

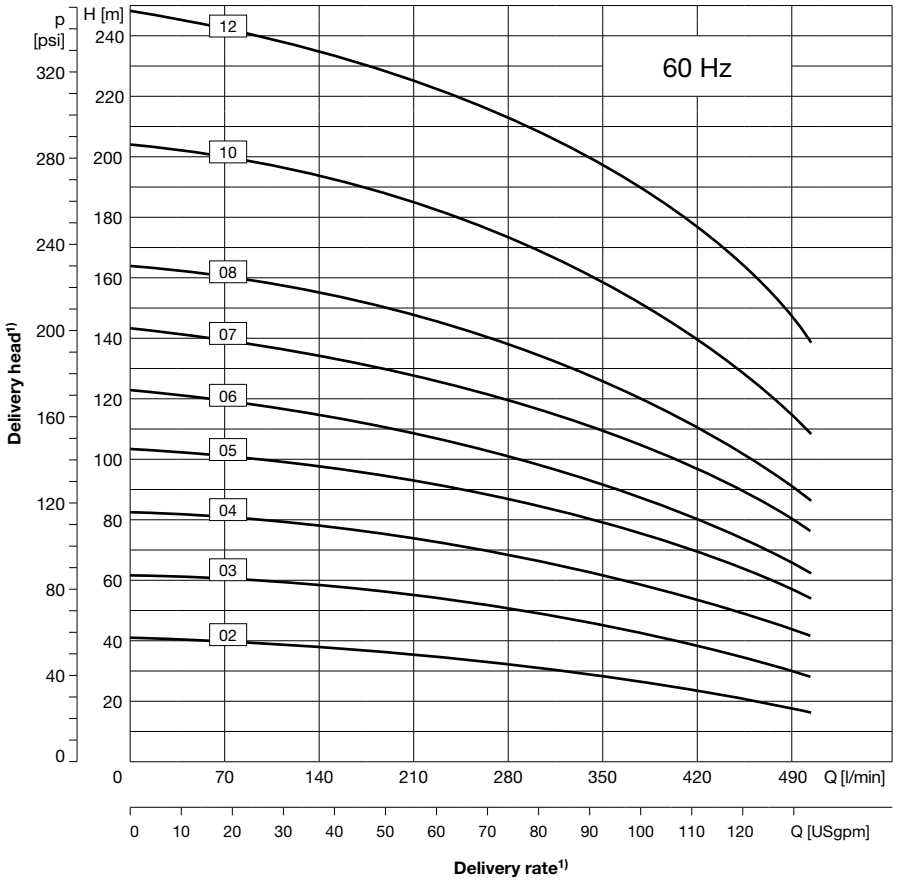
60 Hz, closed impellers



Features

- Vertical multistage centrifugal pump
- For delivery of slightly contaminated fluids
- Installation direcly into the reservoir
- Pressure port is located above the reservoir plate
- Pressure port is designed with internal thread G2

Technical Data

Delivery rate Q_{max}	500 l/min
Delivery head H_{max}	250 m
Immersion depth t_{max}	554 mm
Kinematic viscosity	max. 20 mm^2/s
Delivery temperature	-10 °C to +80 °C
Grain size	max. Ø2 mm
Contamination	max. 50 g/m^3
Direction of rotation	clockwise (as viewed looking down on the motor's ventilation side)
Fluids delivered	Emulsions, cooling and cutting oils, cleaning liquids, mild acids

Mechanical design

Component	Material
Flange	EN-GJS-400
Shaft	Stainless steel 1.4305
Impeller	Stainless steel 1.4301
Intermediate chamber	Stainless steel 1.4301
Tension anchor	Stainless steel 1.4057
Pumps bottom	EN-GJL-250
Elastomers	FPM
Bearings	Deep groove ball bearing with covering disk
Gap bush (H_{max} < 150 m)	POM
Mechanical seal (H_{max} > 150 m)	WC, Carbide, FPM, Stainless steel 1.4571

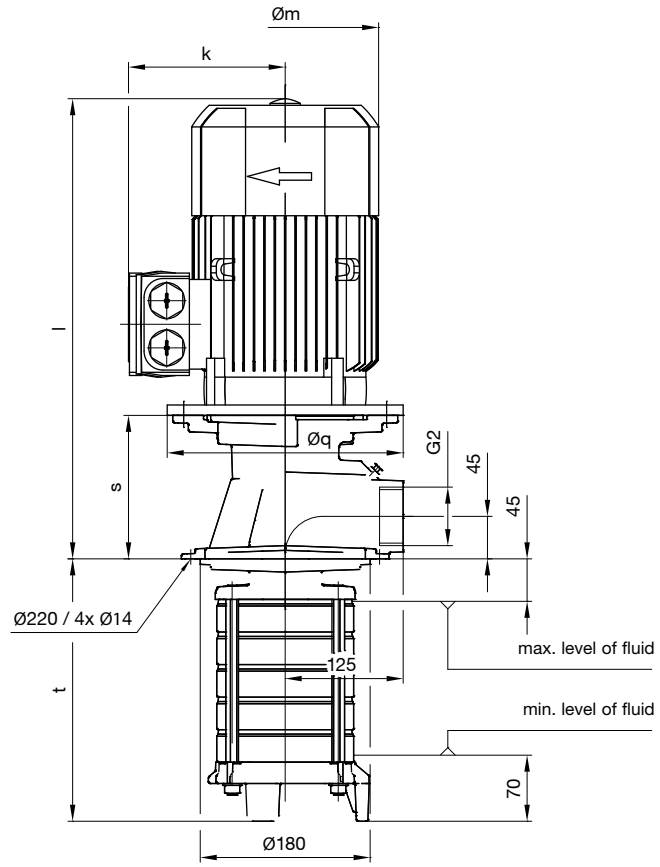
Variations

Component	Material
Mechanical seal	WC, Carbide, FPM, Stainless steel 1.4571
Bottom for extension tube	Stainless steel 1.4301
Intake strainer	Stainless steel 1.4301

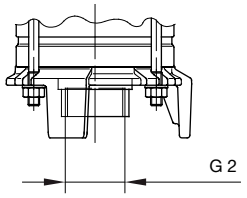
[1)] Data for viscosity of ~1 mm^2/s at a density of ~1 kg/dm^3. Minimum volumetric flow: 5 to 10 % of nominal delivery rate.

PXA 18 – Immersion pumps, sealless

60 Hz, closed impellers



Variation "V"
with bottom for extension tube



Variation "C"
with intake strainer

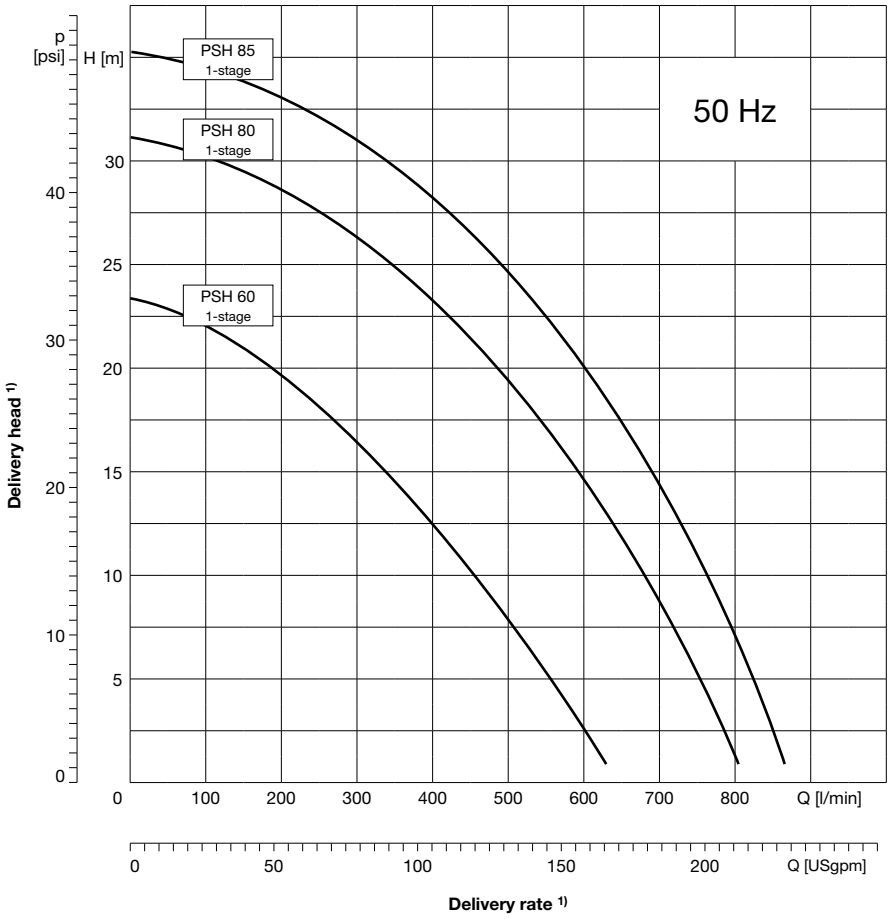
PSH – Immersion pumps, sealless

50 Hz, singlestage, open impellers

Features

- Vertical singlestage centrifugal pump
- For delivery of for highly contaminated fluids
- Installation direcly into the reservoir
- Pressure port is located above the reservoir plate
- Pressure port is designed with internal thread G1¼ (single stage)



Technical Data

Delivery rate Q_{max}	860 l/min
Delivery head H_{max}	32 m
Immersion depth t_{max}	550 mm
Kinematic viscosity	max. 30 mm^2/s
Delivery temperature	-30°C to +80°C
Grain size	max. Ø8 mm
Contamination	max. 9,5 kg/m^3
Direction of rotation	clockwise (as viewed looking down on the motor's ventilation side)
Fluids delivered	Emulsions, cooling and cutting oils, water with antirust additive, heat transfer oils

Mechanical design

Component	Material
Flange	EN-GJL-200

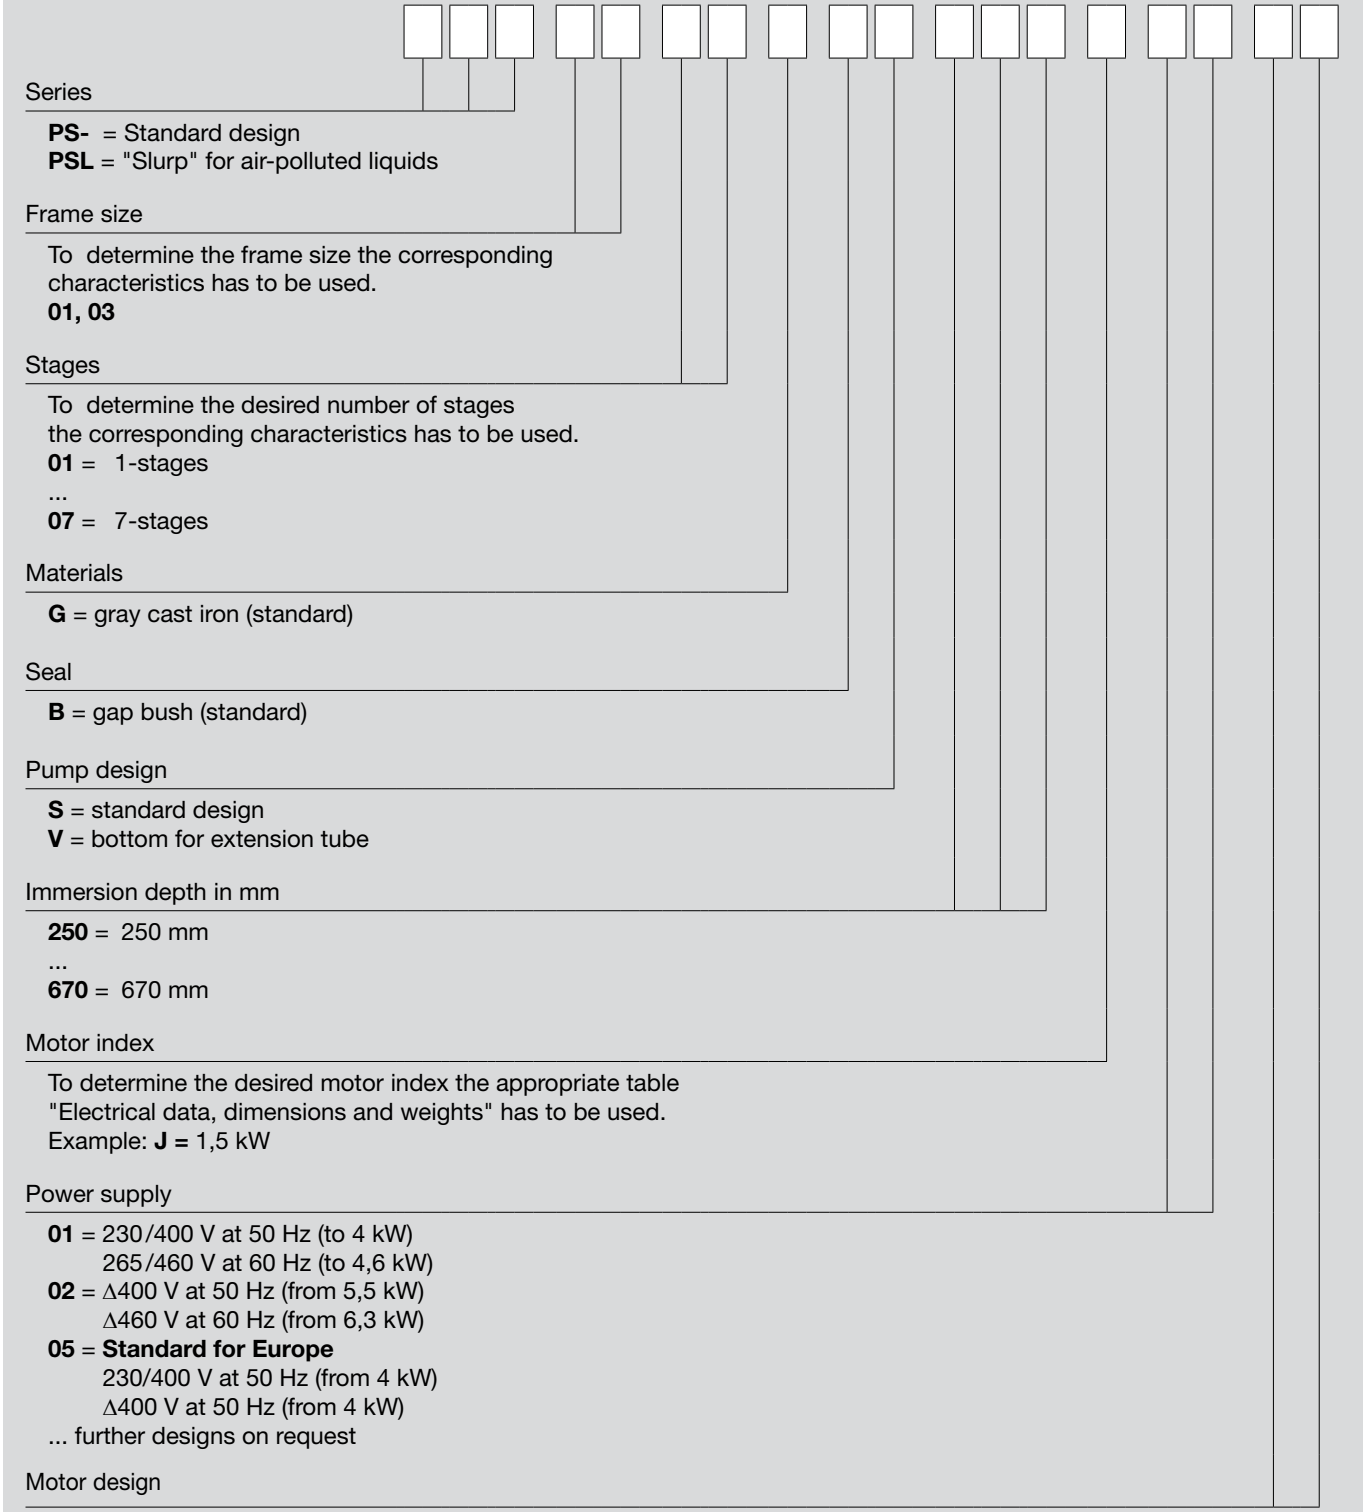
CA = standard (insulation class F, IP 54, 2-pole, IE3)
... further designs on request

Order example: PXA1009GBS383M05BA
Series: **PXA**, Frame size: **10**, **09**-stages, Material: **G** grey cast iron, Seal: **B** gap bush, Pump design: **S** standard design, Immersion depth: **383** mm, Motor index: **M** 4,0 kW, Power supply: **05** 230/400 V 50 Hz (< 4 kW), Motor design: **CA** Standard (IE3)

* All data and measurements refer to the IE3-motors.

PS/PSL – Immersion pumps, sealless

Order key



Series

PS- = Standard design
PSL = "Slurp" for air-polluted liquids

Frame size

To determine the frame size the corresponding characteristics has to be used.
01, 03

Stages

To determine the desired number of stages the corresponding characteristics has to be used.
01 = 1-stages
...
07 = 7-stages

Materials

G = gray cast iron (standard)

Seal

B = gap bush (standard)

Pump design

S = standard design
V = bottom for extension tube

Immersion depth in mm

250 = 250 mm
...
670 = 670 mm

Motor index

To determine the desired motor index the appropriate table "Electrical data, dimensions and weights" has to be used.
Example: **J =** 1,5 kW

Power supply

01 = 230/400 V at 50 Hz (to 4 kW)
265/460 V at 60 Hz (to 4,6 kW)
02 = Δ400 V at 50 Hz (from 5,5 kW)
Δ460 V at 60 Hz (from 6,3 kW)
05 = **Standard for Europe**
230/400 V at 50 Hz (from 4 kW)
Δ400 V at 50 Hz (from 4 kW)
... further designs on request

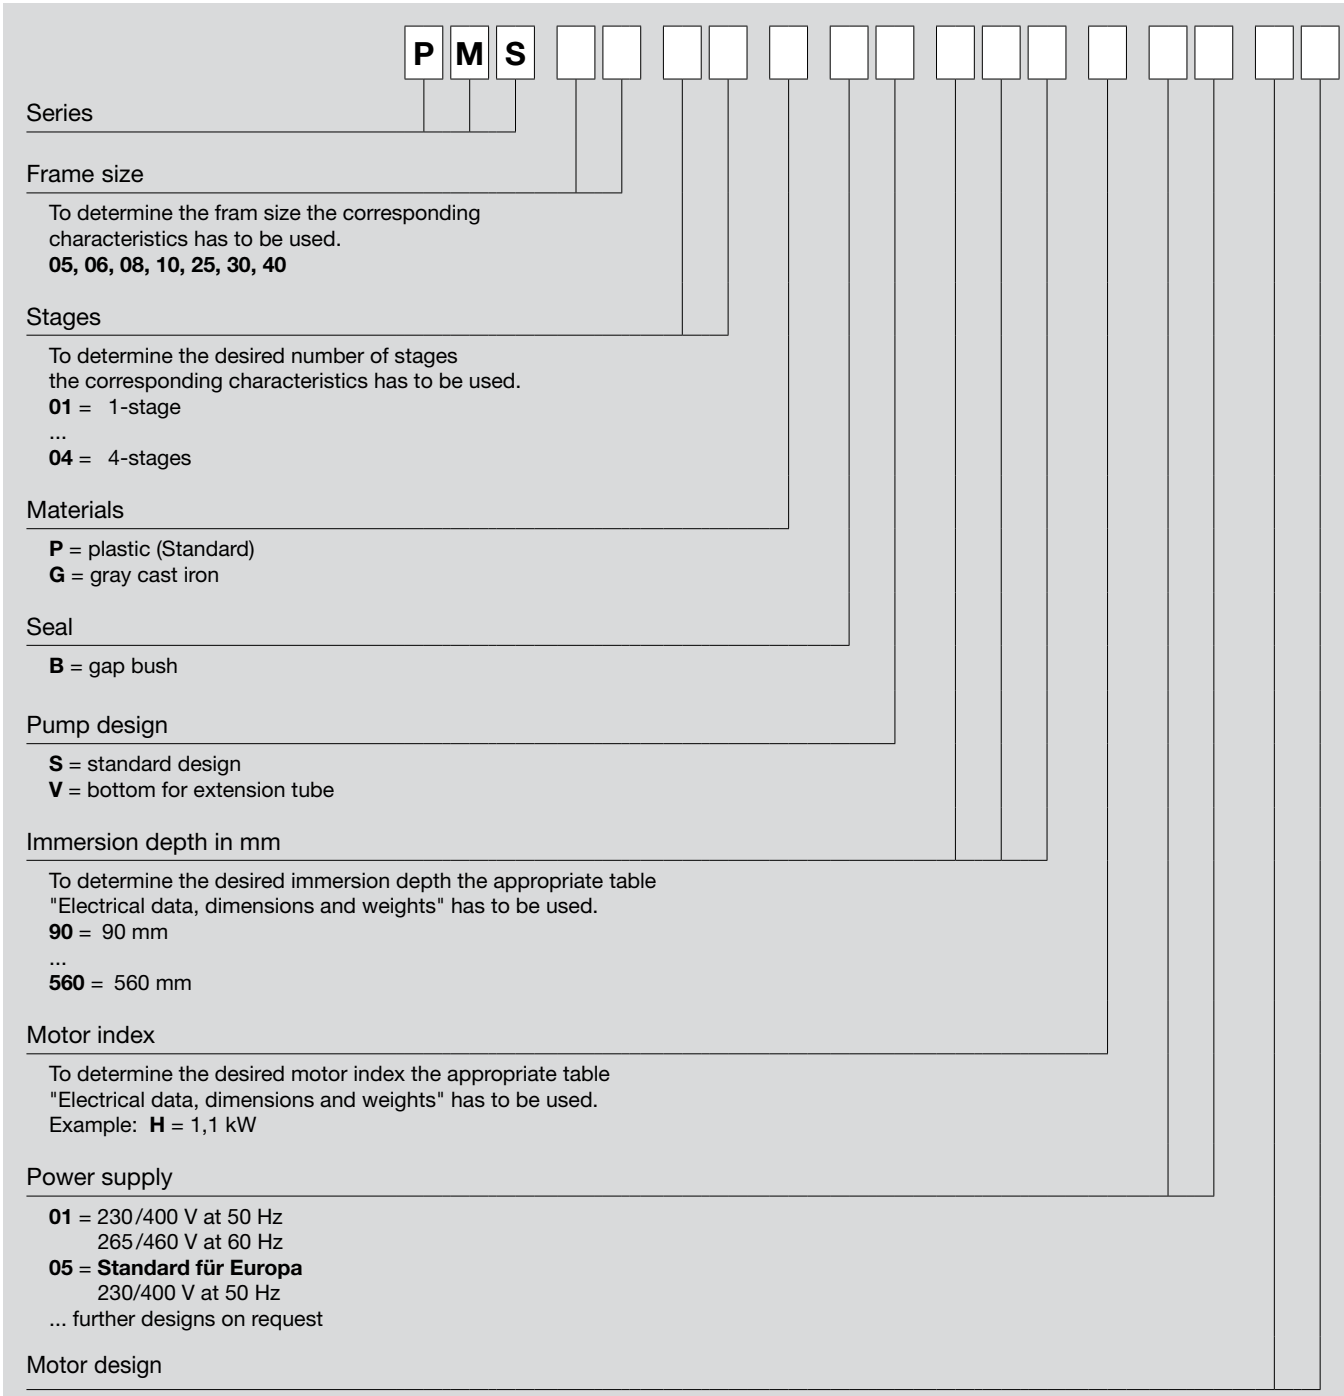
Motor design

BA = standard (insulation class F, IP 54, 2-pole, IE2)
... further designs on request

Order example: PS-0104GBS460M01BA
Series: **PS**, Frame size: **01**, **04**-stages, Material: **G** grey cast iron, Seal: **B** gap bush, Pump design: **S** standard design, Immersion depth: **460** mm, Motor index: **M** 4,0 kW, Power supply: **01** 230/400 V 50 Hz, 265/460 V 60 Hz, Motor design: **BA** standard (IE2)

PMS – Immersion pumps, sealless

Order key

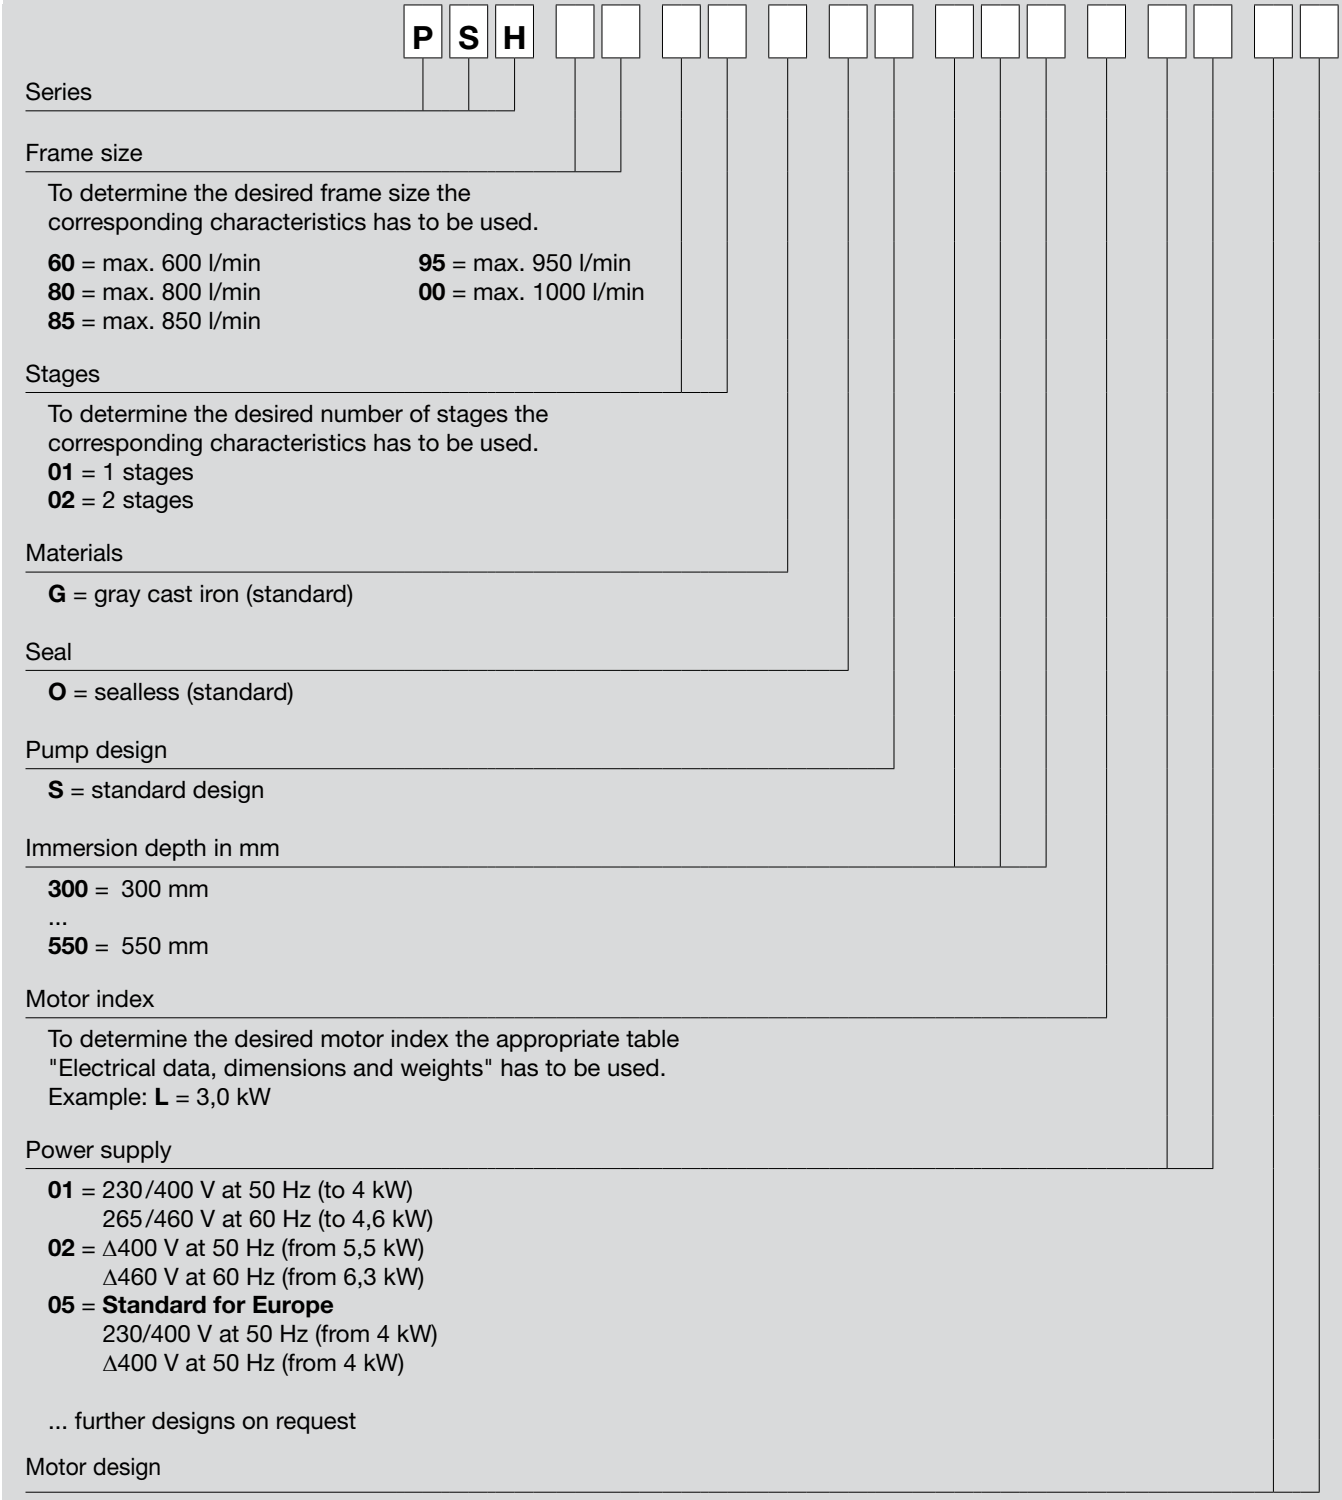


Order example: PMS4001GBS280J01BA
Series: **PMS**, Frame size: **40**, **01**-stage, Material: **G** grey cast iron, Seal: **B** gap bush, Pump design: **S** standard design, Immersion depth: **280** mm, Motor index: **J** 1,5 kW, Power supply: **01** 230/400 V at 50 Hz, 265/460 V at 60 Hz, Motor design: **BA** Standard (IE2)

* All data and measurements refer to the IE2-motors.

PSH – Immersion pumps, sealless

Order key



Order example: PSH8501GOS550N02BA
Series: **PSH**, Frame size: **85**, **01** stage, Material: **G** grey cast iron, Seal: **O** gap bush, Pump design: **S** standard design, Immersion depth: **550** mm, Motor index: **N** 5,5 kW, Power supply: **02** Δ400 V 50 Hz, Δ460 V 60 Hz, Motor design: **BA** Standard (IE2)
