

IPVAP High-pressure Internal Gear Pumps for Variable Speed Drives Technical Data Sheet

Function

- | | |
|---------------------------|-----------------------|
| 1 Pinion shaft | 5 Axial disc |
| 2 Internal gear | 6 Axial pressure area |
| 3 Filler pin | 7 Plain bearings |
| 4a Filler segment carrier | 8 Housing |
| 4b Filler sealing segment | 9 Hydrostatic bearing |

- Suction chamber
- Pressure chamber

By rotation of the gears inside the pump, the pressure fluid (usually hydraulic oil) is drawn into the cavity between the pinion and internal gear. Optimized cross-sectional areas on suction side as well as on pressure side allow operation over a wide range of speed.

In the radial direction, the gear chambers are closed by gear meshing and the filler piece. In the axial direction, the axial plates seal the pressure chamber with the minimal possible gap. This design minimizes volume losses and increases efficiency.

The values given apply for:

- Pumping of mineral oils with a viscosity of 20...40 mm²s⁻¹
- An input pressure of 0.8...3.0 bar absolute

Notes:

- Peak pressures apply for 15% of operating time with a maximum cycle time of 1 minute.
- Please inquire about peak pressures at non-standard speeds.
- Due to production tolerances, the pump volume may be reduced by up to 1.5%.
- The maximum speed depends on the pressure.
- **The speed range 0-400 min⁻¹ depends on the pressure.** Please find data on the diagrams on the following pages.

Pump combinations

- IPVAP pumps of identical or different sizes can be combined in multiflow pumps.
- All sizes of the relevant pump volume are available as two- or three-flow pumps; four-flow pumps must be designed by Voith Turbo H + L Hydraulic.
- The pumps are arranged in increasing order according to frame size and delivery.

Selection

1. Determine pressure ranges and define the appropriate pump serie(s).
2. Determine pump volume and select the appropriate size
3. Define sequence of the pumps.
4. Check the torques.

Mounting, assembly

- Multi-flow pumps are generally mounted to the drive by means of a flange.
